

A small document with a real point.

This two-page PDF is deliberately simple: it checks that inline document links are easy to recognise and that embedded PDF previews remain sharp, legible, and comfortable to navigate on any screen.

Designed as a practical rendering fixture, not a generic placeholder.

Page canvas

Clear blocks, type contrast, and a warm paper surface.

Small screens

Useful at narrow widths without relying on tiny details.

Navigation

A second page confirms next/previous controls and page count.

What this fixture exercises

2

Pages to validate PDF navigation.

A4

A familiar portrait document proportion.

Expected result. A regular link is marked as a PDF and opens safely in a new tab. An Obsidian embed renders the first page inline, scales to the available width, and exposes page controls for the second.

Hatchdoor keeps the note in context while letting the document remain a document.
